3 The variables t and x are related by the differential equation

$$\frac{\mathrm{d}^2 x}{\mathrm{d}t^2} + \frac{\mathrm{d}x}{\mathrm{d}t} + x = t^2 + 1.$$

Find the general solution for $x$ in terms of $t$ .	

······/00\·····

The diagram shows the curve with equation  $y = 2^x$  for  $0 \le x \le 1$ , together with a set of N rectangles each of width  $\frac{1}{N}$ .

(a) By considering the sum of the areas of these rectangles, show that  $\int_0^1 2^x dx < U_N$ , where  $U_N = \frac{2^{\frac{1}{N}}}{N(2^{\frac{1}{N}}-1)}$ .

$$U_N = \frac{2^{\frac{1}{N}}}{N(2^{\frac{1}{N}} - 1)}.$$
