- 2 On a sketch of an Argand diagram, shade the region whose points represent complex numbers z satisfying the inequalities $|z + 2 - 3i| \leq 2$ and $\arg z \leq \frac{3}{4}\pi$. [4]

3

The variables x and y satisfy the equation $x^n y^2 = C$, where n and C are constants. The graph of $\ln y$ against $\ln x$ is a straight line passing through the points $(0.31, 1.21)$ and $(1.06, 0.91)$, as shown in the diagram.

Find the value of n and find the value of C correct to 2 decimal places. [5]

- 6 Find the complex numbers w which satisfy the equation $w^2 + 2iw^* = 1$ and are such that $\text{Re } w \leq 0$. Give your answers in the form $x + iy$, where x and y are real. [6]

- 7 (a) By sketching a suitable pair of graphs, show that the equation $4 - x^2 = \sec \frac{1}{2}x$ has exactly one root in the interval $0 \leq x < \pi$. [2]

- (b) Verify by calculation that this root lies between 1 and 2. [2]

.....

.....

.....

.....

.....

.....

- (c) Use the iterative formula $x_{n+1} = \sqrt{4 - \sec \frac{1}{2}x_n}$ to determine the root correct to 2 decimal places. Give the result of each iteration to 4 decimal places. [3]

A series of horizontal dotted lines for writing.

10 The points A and B have position vectors $2\mathbf{i} + \mathbf{j} + \mathbf{k}$ and $\mathbf{i} - 2\mathbf{j} + 2\mathbf{k}$ respectively. The line l has vector equation $\mathbf{r} = \mathbf{i} + 2\mathbf{j} - 3\mathbf{k} + \mu(\mathbf{i} - 3\mathbf{j} - 2\mathbf{k})$.

(a) Find a vector equation for the line through A and B . [3]

(c) Show that the line through A and B does not intersect the line l .

[4]

A series of horizontal dotted lines for writing the answer.

11

The diagram shows the curve $y = \sin x \cos 2x$ for $0 \leq x \leq \frac{1}{2}\pi$, and its maximum point M .

- (a) Find the x -coordinate of M , giving your answer correct to 3 significant figures. [6]
