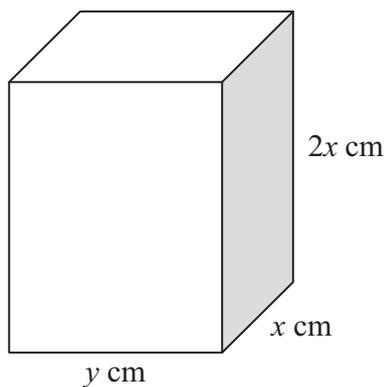

**Figure 4**

Figure 4 shows a solid brick in the shape of a cuboid measuring  $2x$  cm by  $x$  cm by  $y$  cm.

The total surface area of the brick is  $600 \text{ cm}^2$ .

(a) Show that the volume,  $V \text{ cm}^3$ , of the brick is given by

$$V = 200x - \frac{4x^3}{3}.$$

(4)

Given that  $x$  can vary,

(b) use calculus to find the maximum value of  $V$ , giving your answer to the nearest  $\text{cm}^3$ .

(5)

(c) Justify that the value of  $V$  you have found is a maximum.

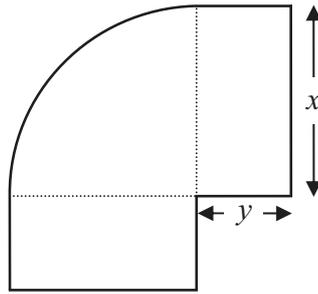

Figure 3

Figure 3 shows a flowerbed. Its shape is a quarter of a circle of radius  $x$  metres with two equal rectangles attached to it along its radii. Each rectangle has length equal to  $x$  metres and width equal to  $y$  metres.

Given that the area of the flowerbed is  $4 \text{ m}^2$ ,

(a) show that

$$y = \frac{16 - \pi x^2}{8x} \quad (3)$$

(b) Hence show that the perimeter  $P$  metres of the flowerbed is given by the equation

$$P = \frac{8}{x} + 2x \quad (3)$$

(c) Use calculus to find the minimum value of  $P$ .

(5)

(d) Find the width of each rectangle when the perimeter is a minimum.  
Give your answer to the nearest centimetre.
