6.

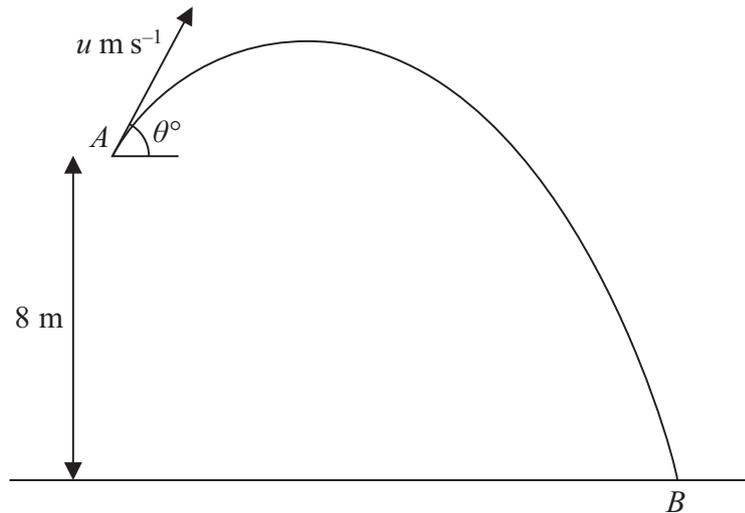

Figure 4

A ball is projected from a point  $A$  which is 8 m above horizontal ground as shown in Figure 4. The ball is projected with speed  $u \text{ m s}^{-1}$  at an angle  $\theta^\circ$  above the horizontal. The ball moves freely under gravity and hits the ground at the point  $B$ . The speed of the ball immediately before it hits the ground is  $2u \text{ m s}^{-1}$ .

(a) By considering energy, find the value of  $u$ . (5)

The time taken for the ball to move from  $A$  to  $B$  is 2 seconds. Find

(b) the value of  $\theta$ , (4)

(c) the minimum speed of the ball on its path from  $A$  to  $B$ . (2)

6. [In this question, the unit vectors  $\mathbf{i}$  and  $\mathbf{j}$  are in a vertical plane,  $\mathbf{i}$  being horizontal and  $\mathbf{j}$  being vertically upwards.]

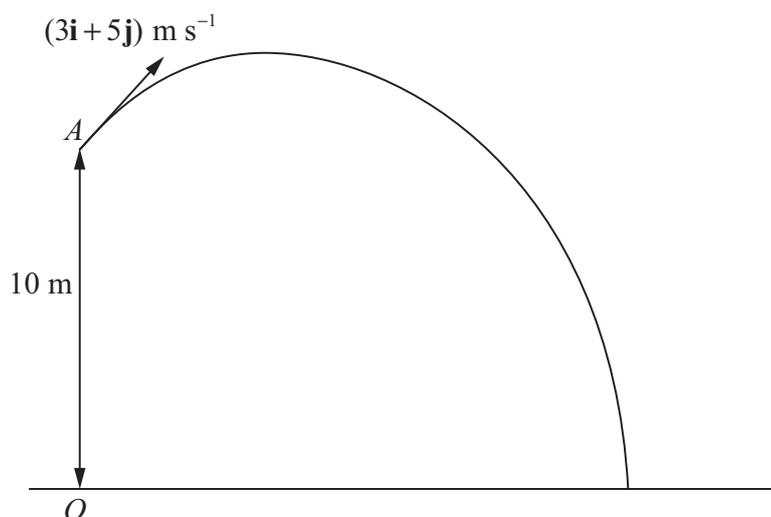

Figure 3

At time  $t = 0$ , a particle  $P$  is projected from the point  $A$  which has position vector  $10\mathbf{j}$  metres with respect to a fixed origin  $O$  at ground level. The ground is horizontal. The velocity of projection of  $P$  is  $(3\mathbf{i} + 5\mathbf{j}) \text{ m s}^{-1}$ , as shown in Figure 3. The particle moves freely under gravity and reaches the ground after  $T$  seconds.

- (a) For  $0 \leq t \leq T$ , show that, with respect to  $O$ , the position vector,  $\mathbf{r}$  metres, of  $P$  at time  $t$  seconds is given by

$$\mathbf{r} = 3t\mathbf{i} + (10 + 5t - 4.9t^2)\mathbf{j} \quad (3)$$

- (b) Find the value of  $T$ . (3)
- (c) Find the velocity of  $P$  at time  $t$  seconds ( $0 \leq t \leq T$ ). (2)

When  $P$  is at the point  $B$ , the direction of motion of  $P$  is  $45^\circ$  below the horizontal.

- (d) Find the time taken for  $P$  to move from  $A$  to  $B$ . (2)
- (e) Find the speed of  $P$  as it passes through  $B$ . (2)

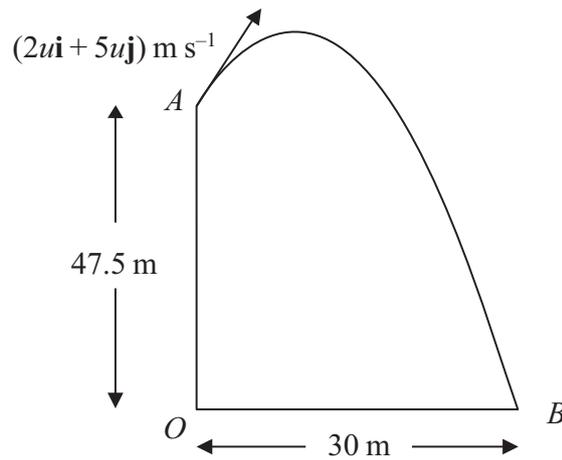

Figure 3

[In this question, the unit vectors  $\mathbf{i}$  and  $\mathbf{j}$  are in a vertical plane,  $\mathbf{i}$  being horizontal and  $\mathbf{j}$  being vertical.]

A particle  $P$  is projected from the point  $A$  which has position vector  $47.5\mathbf{j}$  metres with respect to a fixed origin  $O$ . The velocity of projection of  $P$  is  $(2u\mathbf{i} + 5u\mathbf{j}) \text{ m s}^{-1}$ . The particle moves freely under gravity passing through the point  $B$  with position vector  $30\mathbf{i}$  metres, as shown in Figure 3.

- (a) Show that the time taken for  $P$  to move from  $A$  to  $B$  is  $5 \text{ s}$ . (6)
- (b) Find the value of  $u$ . (2)
- (c) Find the speed of  $P$  at  $B$ . (5)

Figure 3

A cricket ball is hit from a point  $A$  with velocity of  $(p\mathbf{i} + q\mathbf{j})\text{ m s}^{-1}$ , at an angle  $\alpha$  above the horizontal. The unit vectors  $\mathbf{i}$  and  $\mathbf{j}$  are respectively horizontal and vertically upwards. The point  $A$  is  $0.9\text{ m}$  vertically above the point  $O$ , which is on horizontal ground.

The ball takes 3 seconds to travel from  $A$  to  $B$ , where  $B$  is on the ground and  $OB = 57.6\text{ m}$ , as shown in Figure 3. By modelling the motion of the cricket ball as that of a particle moving freely under gravity,

- (a) find the value of  $p$ , (2)
- (b) show that  $q = 14.4$ , (3)
- (c) find the initial speed of the cricket ball, (2)
- (d) find the exact value of  $\tan \alpha$ . (1)
- (e) Find the length of time for which the cricket ball is at least  $4\text{ m}$  above the ground. (6)
- (f) State an additional physical factor which may be taken into account in a refinement of the above model to make it more realistic. (1)
