A curve has the equation y = (3x - 5)³.
 (a) Find an equation for the tangent to the curve at the point P(2, 1).
 The tangent to the curve at the point Q is parallel to the tangent at P.
 (b) Find the coordinates of Q.
 [4] Total: 7

2. (a) Use the identities for $\cos(A+B)$ and $\cos(A-B)$ to prove that

$$2\cos(A)\cos(B) \equiv \cos(A+B) + \cos(A-B).$$

(b) Hence, or otherwise, find in terms of π the solutions of the equation

$$2\cos\left(x+\frac{\pi}{2}\right) = \sec\left(x+\frac{\pi}{6}\right),$$

for x in the interval $0 \le x \le \pi$.

3. Differentiate each of the following with respect to x and simplify your answers.

(a)
$$\ln(\cos(x))$$
 [3]
(b) $x^2 \sin(3x)$ [3]
(c) $\frac{6}{\sqrt{2x-7}}$ [4]
Total: 10

- 4. (a) Express $2\sin(x^{\circ}) 3\cos(x^{\circ})$ in the form $R\sin(x-\alpha)^{\circ}$ where R > 0 and $0^{\circ} < \alpha < 90^{\circ}$.
 - (b) Show that the equation

$$\csc(x^\circ) + 3\cot(x^\circ) = 2$$

can be written in the form

$$2\sin(x^\circ) - 3\cos(x^\circ) = 1$$

(c) Solve the equation

$$\csc(x^\circ) + 3\cot(x^\circ) = 2,$$

for x in the interval $0^{\circ} \le x \le 360^{\circ}$, giving your answers to 1 decimal place.

Core Mathematics – Practice Paper 3G

- 5. (a) Show that (2x + 3) is a factor of $(2x^3 x^2 + 4x + 15)$.
 - (b) Hence, simplify

$$\frac{2x^2 + x - 3}{2x^3 - x^2 + 4x + 15}.$$
[4]

(c) Find the coordinates of the stationary points of the curve with equation

$$y = \frac{2x^2 + x - 3}{2x^3 - x^2 + 4x + 15}.$$

6. The population in thousands, P, of a town at time t years after 1st January 1980 is modelled by the formula

$$P = 30 + 50e^{0.002t}$$

Use this model to estimate

- (a) the population of the town on 1st January 2010,
- (b) the year in which the population first exceeds 84000.

The population in thousands, Q, of another town is modelled by the formula

$$Q = 26 + 50e^{0.003t}.$$

(c) Show that the value of t when P = Q is a solution of the equation

$$t = 1000 \ln \left(1 + 0.08 \mathrm{e}^{-0.002t} \right).$$

(d) Use the iteration formula

$$t_{n+1} = 1000 \ln \left(1 + 0.08 \mathrm{e}^{-0.002 t_n} \right) \,.$$

with $t_0 = 50$ to find t_1, t_2 and t_3 and hence, the year in which the populations of these two towns will be equal according to these models.

7. Figure shows the graph of y = f(x) which meets the coordinate axes at the points (a, 0) and (0, b), where a and b are constants.

- (a) Showing, in terms of *a* and *b*, the coordinates of any points of intersection with the axes, [6] sketch on separate diagrams the graphs of
 - i. $y = f^{-1}(x)$, ii. y = 2f(3x).

Ŭ

Given that

$$f(x) = 2 - \sqrt{x+9}, \quad x \in \mathbb{R}, \quad x \ge -9,$$

(b) find the values of a and b,

(c) find an expression for $f^{-1}(x)$ and state its domain.
