How I can achieve better:

•

•

•

1.

$$f(x) \equiv 2x^2 + 7x - 3.$$

Given that when f(x) is divided by (2x - k) the remainder is -8,

(a) find the two possible values of k.

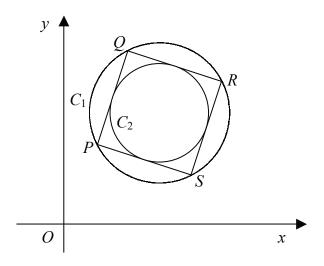

[4]

Given also that when f(x) is divided by (x-3k) the remainder is 27,

(b) find k.

[3] Total: 7

2. Figure shows a square PQRS.

The corners of the square have the following coordinates:

The circle C_1 circumscribes the square.

(a) Find the coordinates of the centre of circle C_1 .

[2]

(b) Find the radius of circle C_1 .

[2]

[4]

The circle C_2 is inscribed in the square.

(c) Find an equation of circle C_2 .

Total: 8

3. With respect to a fixed origin, O, the points A and B have position vectors $(\mathbf{i} - 5\mathbf{j} - 4\mathbf{k})$ and $(3\mathbf{i} + 5\mathbf{j} - 2\mathbf{k})$ respectively.

(a) Write down vector \overrightarrow{AB} .

[2]

The point C has position vector $(9\mathbf{i} - 7\mathbf{j} - 2\mathbf{k})$.

(b) Show that \overrightarrow{AC} is perpendicular to \overrightarrow{AB} .

(c) Find the area of triangle ABC in the form $k\sqrt{6}$.

[4]

- (a) Given that $|x| < \frac{1}{2}$, expand $(1-2x)^{\frac{1}{2}}$ as a series in ascending powers of x, as far as the [3]
- Total: 9

[3]

[4]

[4]

[7]

(b) Show that when x = 0.01,

$$(1-2x)^{\frac{1}{2}} = \frac{7}{10}\sqrt{2}.$$

(c) Hence, use your series to find the value of $\sqrt{2}$ correct to 6 decimal places.

Total: 10

5. (a) Show that

$$\int_0^{\frac{\pi}{4}} (1 - \sin(4x)) \, \mathrm{d}x = \frac{1}{4} (\pi - 2).$$

(b) Use integration by parts to find

$$\int x^2 e^{\frac{1}{2}x} dx.$$

Total: 11

6. (a) i. Differentiate 3^{2x} with respect to x.

[7]

ii. Find the coordinates of the stationary point on the curve

$$y = 3^{2x} - 18(3^x).$$

(b) A curve is given by

$$(x+2y)^2 - 3x^2 = 4.$$

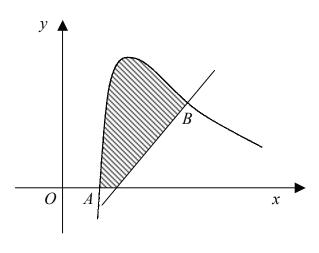

Find the gradient of the curve at the point (2, -3).

Total: 13

[6]

7. Figure shows part of the curve with parametric equations

$$x = \frac{3}{t}$$
, and $y = 4t - t^2$, $t \neq 0$.

(a) Find the value of the parameter t at the point A where the curve meets the x-axis.

[2]

[6]

[9]

The point B on the curve has parameter t = 1.

- (b) Find an equation of the normal to the curve at the point B.
- (c) Show that the area of the shaded region enclosed by the curve, the x-axis and the normal to the curve at B is $12(2 \ln(2) 1)$.
